

Audit Manager+ vs. MDaudit

Which Healthcare Auditing Software Is Right for Your Organization?

Healthcare organizations are under increasing pressure to protect revenue, ensure billing accuracy, and demonstrate defensible compliance practices, often with limited staff and growing audit volumes. As a result, audit technology has become a strategic investment rather than a back-office tool.

Healthcare organizations are under increasing pressure to protect revenue, ensure billing accuracy, and demonstrate defensible compliance practices, often with limited staff and growing audit volumes. As a result, audit technology has become a strategic investment rather than a back-office tool.

Two platforms frequently evaluated by compliance, revenue integrity, and audit teams are [Audit Manager+ by Healthicity](#) and MDaudit. While both support healthcare auditing, their philosophies, strengths, and ideal use cases differ significantly.

This guide provides a clear, practical comparison of Audit Manager+ vs. MDaudit, with a focus on audit execution, flexibility, and revenue protection, helping you determine which solution best aligns with your audit strategy.

Audit Manager+ is an audit-first healthcare auditing platform built for teams that need hands-on audit execution, customization, and prospective revenue protection. MDaudit is designed for enterprise-wide revenue integrity analytics. Organizations focused on performing high-quality audits efficiently often choose Audit Manager+ as a simpler, more flexible alternative to MDaudit.

OVERVIEW

What is the Difference Between Audit Manager+ and MDaudit?

At a high level, the distinction between Audit Manager+ and MDaudit comes down to focus.

Audit Manager+ is purpose-built as an audit-first platform, designed by auditors for auditors. It prioritizes accuracy, consistency, customization, and usability at the point of audit without forcing teams into rigid workflows or unnecessary modules.

MDaudit, by contrast, positions itself as a broad revenue integrity ecosystem,

combining auditing with billing analytics, benchmarking, and enterprise-level monitoring. While powerful, that breadth can introduce complexity for teams whose primary need is executing high-quality audits efficiently and defensibly.

For organizations that want direct control over audit methodology, scoring, and reporting, Audit Manager+ often delivers faster value with less overhead.

AUDIT MANAGER+ VS. MDAUDIT FEATURE COMPARISON

Capability Area	Audit Manager+ (Healthicity)	MDaudit
Core Focus	Audit-first, auditor-driven workflows	Enterprise revenue integrity platform
Prospective Auditing	Yes	Limited / analytics-driven
Custom Checklists	Fully customizable, auto-assigned	Structured templates
Audit Multiple Auditees Simultaneously	Yes	No
Line-Level Claim Audits	Yes – every data element	Yes
Scoring Rules	Highly configurable and weighted	Standardized
QA Oversight	Built-in, skill-based QA	Available
Multi-Level Reporting	Line → chart → department → organization	Enterprise dashboards
Code Set Coverage	All major code sets supported	Broad
Implementation Complexity	Lower, faster to deploy	Higher, enterprise-level
Ideal Organization Size	Small-mid to enterprise audit teams	Large health systems

PROSPECTIVE AUDITING AND EARLY RISK PREVENTION

Can Audit Manager+ Help You Protect Revenue Earlier?

One of the most meaningful advantages of Audit Manager+ is its ability to help protect revenue.

Instead of identifying errors only after claims are submitted (or after denials occur), Audit Manager+ supports prospective claim reviews, allowing organizations to:

- Validate claims before submission
- Identify coding risks early
- Reduce downstream denials and rework
- Prevent unnecessary claim resubmissions

By pairing pre-bill audits with analytics that surface systemic coding risks, Audit Manager+ helps organizations shift from reactive correction to proactive revenue protection.

MDaudit offers denial analytics and predictive insights at scale, but Audit Manager+ stands out for organizations that want hands-on, audit-driven prevention embedded directly into daily workflows.

AUDIT STRUCTURES

How Do Custom Audit Checklists in Audit Manager+ Compare to MDaudit Templates?

Audit Manager+ gives audit teams full control over how audits are structured through highly customizable checklists that adapt to specialty, facility type, payer, or risk focus.

Rather than forcing auditors into rigid templates, the platform allows organizations to build, modify, and auto-assign checklists based on data elements, procedure codes, or claim types.

This flexibility streamlines audit setup while preserving methodological consistency across auditors and departments.

Custom checklists also support tailored scoring and reporting, making it easier to surface meaningful trends, reduce manual effort, and ensure audits align with internal standards and regulatory expectations.

AUDITING MULTIPLE AUDITEES SIMULTANEOUSLY

How Does Audit Manager+ Enable You to Audit Multiple Auditees at the Same Time?

A practical differentiator for audit teams is the ability of Audit Manager+ to support parallel auditing within a single audit workflow.

Auditors can evaluate a provider and a coder simultaneously using the same encounter.

This approach eliminates duplicate work and allows organizations to pinpoint where errors originate—whether from documentation, coding interpretation, or process breakdowns.

By enabling side-by-side analysis, Audit Manager+ accelerates root-cause identification and supports more targeted education and remediation strategies.

CODE SETS

What Code Sets Can You Audit in Audit Manager+ Compared to MDaudit?

Audit Manager+ supports one of the most comprehensive code set libraries available in healthcare auditing, allowing organizations to audit virtually every claim type within a single platform.

Auditors can review CPT®, HCPCS, CDT, ICD-10-CM, ICD-10-PCS, revenue codes, condition codes, occurrence codes, value codes, type of bill, discharge status, HCCs, and more, without switching systems or relying on workarounds.

This breadth of coverage is especially valuable for organizations auditing across professional, facility, dental, and specialty services, ensuring consistency and accuracy regardless of claim complexity.

By capturing every relevant data element, Audit Manager+ enables deeper insight, stronger defensibility, and more actionable audit findings.

IMPLEMENTATION

How Long is the Implementation Time of Audit Manager+ vs. MDaudit?

Audit Manager+ is intentionally designed to minimize friction during implementation and daily use. Audit teams can configure checklists, scoring rules, and workflows quickly without relying on extensive IT involvement or prolonged onboarding timelines.

Because the platform aligns closely with how auditors already think and work, users are able to become productive very quickly. This ease of use is particularly valuable for organizations with lean compliance teams that need results quickly without dedicating months to system configuration and training.

AUDIT FLEXIBILITY

How Does Audit Manager+ Support Various Audit Scenarios?

Healthcare audits vary widely by specialty, payer, and risk profile, and Audit Manager+ is built to accommodate that variability.

Organizations can fully customize audit templates, checklists, scoring logic, and error classifications to align with internal policies or regulatory expectations.

Rather than forcing auditors into rigid frameworks, Audit Manager+ adapts to the audit methodology an organization already trusts, supporting consistency while preserving flexibility.

AUDITOR EXPERIENCE

How Does Audit Manager+ Keep Focus on What Auditors Need?

For teams focused primarily on auditing, not managing the full revenue cycle, Audit Manager+ delivers what's needed without unnecessary complexity.

Auditors can focus on executing audits, tracking trends, and supporting education and compliance, spending less time managing software and more time analyzing risk.

BEST FIT

Who Should Choose Audit Manager+ vs. MDaudit?

Audit Manager+ is ideal for consulting firms, health systems, and organizations auditing across multiple clients, entities, or facilities. Its true multi-account architecture keeps each client or location securely separated while enabling centralized oversight, standardized methodologies, and enterprise-level reporting.

The platform supports client-specific workflows, customizable audit tools, and flexible permissions, making it easier to manage workloads, tailor audits, and maintain consistency across a diverse portfolio. Consolidated analytics and roll-up reporting provide leadership clear visibility into trends, risks, and performance across all accounts without compromising data separation.

In contrast, MDaudit is better suited for single-organization environments, while Audit Manager+ delivers the scalability, governance, and efficiency needed to support complex, multi-client audit programs.

AUDIT FLEXIBILITY

How Does Audit Manager+ Support Various Audit Scenarios?

Healthcare audits vary by specialty, payer, and risk profile, and Audit Manager+ is built to support that complexity. It allows full customization of audit templates, checklists, scoring, and error classifications to align with internal policies and regulatory expectations.

Instead of forcing rigid frameworks, Audit Manager+ adapts to the audit methodologies organizations already trust, maintaining consistency while preserving flexibility.

FINAL CONSIDERATIONS

Audit Manager+ vs. MDaudit

While both platforms are respected within healthcare compliance and auditing, Audit Manager+ is the stronger choice for organizations that value audit precision, configurability, and ease of use.

Its audit-first design, prospective revenue protection, and deep customization make it especially effective for teams that want to execute audits efficiently and defensibly without unnecessary system complexity.

MDaudit may suit organizations focused on large-scale revenue integrity analytics, but for teams that want a solution built around how audits are actually performed, Audit Manager+ delivers greater clarity, control, and confidence.
