## Consultation Report

Admission Date: January 14, 2017
Discharge Date:
Report type: Consultation
Consulting Physician: Dr. C Adams, MD
Referring Physician: Dr. R Jones, MD
Performed by: C Adams MD
Signed by: C Adams MD (02-16-2017 7:13 pm)

## Patient

Ada - Z123456
Date of Consultation
01/16/2017
Reason for Consultation
Evaluation of hematochezia
Chief Complaint Blood in stool

## History of Present Illness

The patient is a 68 -year-old who presented in the Emergency department with a one-day history of bright bloody bowel movement. The patient has a past history of traumatic subdural hematoma with craniotomy secondary to auto accident in 2015. She is verbal but only
answers questions intermittently. Most of the history is obtained from her daughter. Patient does have lower abdominal tenderness. Patient does not have nausea or vomiting. There is no report of diarrhea or constipation. In the ED, she was initially found to be anemic with HGB 8.9.

## Review of Systems

ROS - limited as patient only answers questions intermittently
General: no weight change, fever or chills
HEENT: no headache
Eyes: no acute visual changes
Cardiac: no chest pain, syncope or orthopnea
Respiratory: no SOB or hemoptysis
Gl: no nausea, abdominal pain, vomiting, diarrhea or constipation
Skin: no rashes

## Allergies <br> LATEX <br> Penicillin

## Social History

Smoker Type: never smoker/user

## Family History

Not on file

## Physical Exam

Vitals \& Measurements
T: 36.4 HR: 68 RR: 16 BP: $99 / 51$ SpO2: $94 \%$ HT 157.5 cm WT 46.7 Kg
General: well-developed, well-nourished, appears stated age, A \& O to person only.
Head: atraumatic
Eyes: pupils ERR to light, conjunctiva clear, no icterus
ENT: nasal mucosa non-inflamed, no nasal discharge, oral mucosa moist without erythema or exudates.
Neck: supple, no masses
Heart: RRR, no murmurs, gallops or rubs
Lungs: no wheezing or crackles, breath sounds equal bilaterally
Abdomen: $\mathrm{BS}+$, soft, no distention, mild tenderness lower abdomen, no hepatomegaly, no
hernia
Skin: warm and dry, no rashes
Musculoskeletal: no lower extremity edema

## Lab Results

HGB: $6.4 \mathrm{~g} / \mathrm{dL}$

## Diagnostic Results

No qualifying data available

## Assessment/Plan

1. Gl bleed - reports mild abdominal pain with no significant risk factors or alarm symptoms. Outpatient screening colonoscopy and EGD 3 years ago were normal. Plan for repeat colonoscopy today
2. Anemia - secondary to Gl bleed. Continue transfusion to keep HGB $>7$
3. Hypotension - secondary to above. Discussed with Dr F Packer. We will continue supportive care and monitor BP at this time.
